# National Multimodal Freight Policy

## 49 U.S.C. § 70101

(a) In General.—

It is the policy of the United States to maintain and improve the condition and performance of the National Multimodal Freight Network established under section 70103 to ensure that the Network provides a foundation for the United States to compete in the global economy and achieve the goals described in subsection (b).

(b) Goals.—The goals of the national multimodal freight policy are—

- (1) to identify infrastructure improvements, policies, and operational innovations that—
  - (A) strengthen the contribution of the National Multimodal Freight Network to the economic competitiveness of the United States;
  - (B) reduce congestion and eliminate bottlenecks on the National Multimodal Freight Network; and
  - (C) increase productivity, particularly for domestic industries and businesses that create high-value jobs;
- (2) to improve the safety, security, efficiency, and resiliency of multimodal freight transportation;
- (3) to achieve and maintain a state of good repair on the National Multimodal Freight Network;
- (4) to use innovation and advanced technology to improve the safety, efficiency, and reliability of the National Multimodal Freight Network;
- (5) to improve the economic efficiency and productivity of the National Multimodal Freight Network;
- (6) to improve the reliability of freight transportation;

(7) to improve the short- and long-distance movement of goods that—

- (A) travel across rural areas between population centers;
- (B) travel between rural areas and population centers; and
- (C) travel from the Nation's ports, airports, and gateways to the National Multimodal Freight Network;

(8) to improve the flexibility of States to support multi-State corridor planning and the creation of multi-State organizations to increase the ability of States to address multimodal freight connectivity;

(9) to reduce the adverse environmental impacts of freight movement on the National Multimodal Freight Network; and

(10) to pursue the goals described in this subsection in a manner that is not burdensome to State and local governments.

(c) Implementation.—

The Under Secretary of Transportation for Policy, who shall be responsible for the oversight and implementation of the national multimodal freight policy, shall—

- (1) carry out sections 70102 and 70103;
- (2) assist with the coordination of modal freight planning; and
- (3) identify interagency data sharing opportunities to promote freight planning and coordination.

(Added Pub. L. 114–94, div. A, title VIII, § 8001(a), Dec. 4, 2015, 129 Stat. 1605.)

# PA Truck Bottlenecks

# PennDOT/RITIS Truck Bottleneck Analysis Methodology

Traffic bottlenecks were identified for the interstate and major non-interstate highways using a methodology developed by the University of Maryland and documented in the bottleneck reports produced for the Regional Integration Transportation Information System (RITIS). This analysis uses a comparison of congested highway speeds to free-flow speeds to identify the locations and severity of traffic bottlenecks.

This approach was developed for overall vehicular traffic and is not specific to truck traffic, so PennDOT refined this analysis by applying the following steps:

1. Identify 2019 and 2020 truck volumes for each segment using PennDOT RMS data.
2. For each year, calculate the freight bottleneck delay for each segment by multiplying the source bottleneck speed differential by the truck volume for that segment.
3. Develop a composite freight bottleneck delay by combining adjacent roadway segments into a single continuous roadway section for each location.
4. Rank the top 50 bottleneck locations across Pennsylvania.
5. For each analysis year, compute an index for each location based on a comparison to the worst bottleneck (i.e., ranked #1 on the list). The worst bottleneck for each analysis year is assigned a rating of 100.00, and the Index ratings for the remaining 50 bottlenecks are computed proportionally by the aggregate truck delays for each segment compared to the aggregate truck delays for the worst bottleneck.

The 2020 and 2019 truck bottleneck rankings are shown in the accompanying tables. Bottlenecks listed on the 2020 table and highlighted in yellow are those that are being addressed through recent or ongoing projects, or are listed on PennDOT's FY 2021-2024 Transportation Improvement Program (TIP).

The Freight Plan also includes a number of projects and initiatives that are not presently programmed. This points to an important function of the FMP. It should be routinely considered as programming occurs either in modal grant programs and/or the Twelve-Year Program—statewide or regional. Improving the planning-programming-performance connection is a major emphasis for both the LRTP and the FMP.

## PA Rail Transload Facilities

**Table 1: Class I Railroads**

Name	Description
<b>Butler TRANSFLO (CSX) Facility</b>	The Butler transloading facility is located in western Pennsylvania between Pittsburgh and Erie. Transloading services are offered for dry bulk, food grade, and liquid commodities. The facility is also capable of processing hazardous materials.
<b>Chester TRANSFLO (CSX) Facility</b>	The Chester transloading facility is located in southeastern Pennsylvania between Philadelphia and Wilmington. Transloading services are offered for dry bulk, food grade, and liquid commodities. The facility is also capable of processing hazardous materials.
<b>Philadelphia TRANSFLO (CSX) Facility</b>	The Philadelphia transloading facility is located along the Schuylkill River to the south of downtown Philadelphia. Transloading services are offered for dry bulk, food grade, and liquid commodities. The facility is also capable of processing hazardous materials.
<b>Pittsburgh Thoroughbred Bulk Transfer (Norfolk Southern) Terminal</b>	The Pittsburgh NS transloading facility is located to the west of downtown Pittsburgh. Transloading services are offered for dry bulk, food grade, and liquid commodities. The facility is also capable of processing hazardous materials.
<b>Pittsburgh TRANSFLO (CSX) Facility</b>	The Pittsburgh transloading facility is located along the Monongahela River to the southeast of downtown Pittsburgh. Transloading services are offered for dry bulk, food grade, and liquid commodities. The facility is also capable of processing hazardous materials.
<b>Pottstown Thoroughbred Bulk Transfer (Norfolk Southern) Terminal</b>	The Pottstown transloading facility is located in southeastern Pennsylvania to the northwest of Philadelphia. Transloading services are offered for dry bulk, food grade, and liquid commodities. The facility is also capable of processing hazardous materials.

# Freight Investment Plan

## PA FMP Appendix 12: Freight Investment Plan

The Freight Investment Plan is intended to help ensure that freight mobility is an important and regular consideration in project programming. Ideally freight factors are considered as part of developing all projects, as applicable.

The projects included in the Freight Investment Plan are a key input to the 12-Year Program and Statewide Transportation Improvement Program (STIP). Some projects are already part of the 12-Year Program and STIP. Others are not listed on those programs, but will be considered routinely as part of program updates.

It is also timely and important to note that a fiscally constrained Freight Investment Plan is a sound policy approach at any time. At this particular time there is a wide gap between PennDOT's resources and the annual investment need. This was documented by the Transportation Revenue Options Commission (TROC) in its strategic funding proposal as submitted to Governor Tom Wolf in July 2021 (<https://www.penndot.gov/about-us/funding/Documents/TROC-Final-Report.pdf>).

The fiscally constrained project list that follows reflects the proposed use of National Highway Freight Program (NHFP) funds distributed to Pennsylvania by formula under the IIJA. The new law allocated formula-based funds ranging from \$1.37 billion to \$1.48 billion each year through the NHFP for the purposes of improving the freight system across the U.S. These freight-specific projects are included in the STIP as approved by the State Transportation Commission (STC). The list will be updated as new projects are selected for inclusion in the STIP and approved by the STC. During future program updates, projects from the Freight Movement Plan's unfunded list as well as newly identified projects will be considered for inclusion, beginning with the 2025 12-Year Program update.

Federal law also allows for a portion of NHFP funding to go toward intermodal and rail projects. Given its railroading heritage, Pennsylvania's investment in rail freight infrastructure has been extensive, including an annual rail freight improvement program, and investments from the state capital budget which historically have included major investments such as the double-stack clearance program. A listing of unfunded candidate rail freight projects is also included as part of the freight investment plan for illustrative purposes. These projects are outside of fiscal constraint. The Freight Investment Plan's implementation will include a continuing focus on ways in which PennDOT can support rail freight or promote intermodal investments in water ports and air cargo.

The Commonwealth has provided a wide range of investments for the state's three water ports and will continue to participate in keeping this as an area of focus, working with the metropolitan planning organizations/rural planning organizations (MPOs/RPOs) and the ports directly in the Philadelphia, Pittsburgh, and Erie regions. The development of the Freight Movement Plan included workshops with the Delaware Valley Regional Planning Commission (DVRPC) and the Southwestern Pennsylvania Commission (SPC)—the MPOs in Philadelphia and Pittsburgh, respectively—as a tangible first step to ensure alignment between state freight planning and regional freight planning. The opportunity now is to build on the integration of the respective planning and programming efforts—state and regional.

PennDOT will continue to take steps with the MPOs, RPOs, and other partners to promote freight investments and to ensure that freight factors are considered in project development. Further, PennDOT will work to further expand engagement with private-sector freight stakeholders to better understand freight issues and needs and to foster partnership and collaboration in addressing those needs wherever possible.

## NHFP Program: Eligible Activities

Program eligibilities and attributes of the NHFP Program include:

- Project development activities
- Construction, reconstruction rehabilitation, and land acquisition
- Intelligent Transportation Systems (ITS), including freight ITS
- Environmental mitigation related to freight impact
- Rail-highway grade separation
- Geometric design improvements
- Truck-only lanes
- Runaway and climbing truck lanes
- Shoulder widening
- Truck Parking Facilities
- Real-time information systems
- Electronic screening and credentialing
- Traffic signals
- Work Zone management
- Ramp metering
- ITS and other technologies for intermodal facilities and border crossings
- Additional road capacity for highway freight bottlenecks
- Any project that improves flow of freight to the NHFN
- Diesel retrofits
- Data collection and analysis

State DOTs may also use no more than 10 percent of apportioned funds on certain non-highway projects, such as governmental costs associated with rail and intermodal connectors.
